

ASP.NET Core 3

Programming Exercise 02

The following exercises are open book and open note. You are free to use any written documentation you wish. these are individual exercises, and you cannot consult with each other in writing your programs. Optionally, *if instructed by the instructor* you may be directed to work in groups. If so, the exercise will be a group exercise.

Using only CSS markup, style an HTML form document that will allow a user to submit data to a table in your project database. “Only CSS” means just HTML and CSS, but no JavaScript. Of course, if you know JavaScript you may use it if you choose.

There is one deliverable:

1. Your HTML source document (the document with the `.html` extension), and
