ASP.NET Core 3

Programming Exercise 01

The following exercises are open book and open note. You are free to use any written documentation you wish. these are individual exercises, and you cannot consult with each other in writing your programs. Optionally, *if instructed by the instructor* you may be directed to work in groups. If so, the exercise will be a group exercise.

Using only HTML markup, create an HTML form document that will allow a user to submit data to a table in your project database. "Only HTML" means no CSS and no JavaScript. Of course, if you know CSS or JavaScript you may use them if you choose.

There is one deliverable:

1. Your HTML source document (the document with the `.html` extension), and
